

January 1976

President's Message

Mr. Samuel Warren

It came to mind the first of this month and the beginning of the New Year that it was just a year ago that I came to serve Western States Chiropractic College as its President.

After adjusting to the rapidity with which the year had passed the temptation was to enumerate the accomplishments and improvements made by the outstanding administration and faculty and the remarkable student body of Western States Chiropractic College. Believe me the list is impressive!

On reflection, however it seemed more appropriate to consider the equally impressive list of accomplishments and improvements needed for the coming year. I would like to share one of these with you.

It seems to me we must resolve the age old problem of the chiropractic profession as to whether we seek unity of purpose within the profession or excellence in the educational level of our institution. Therein lies the problem. As long as excellence means "You must do it my way and subscribe to my philosophy or it isn't good," we will achieve a pseudo-excellence that is excellent only by our own definition.

If it is felt that to achieve unity we must subscribe to this definition of excellence we then succumb to that state of confusion that has been out lot too long. Why anyone would struggle to achieve either excellence or unity, one at the expense of the other, is completely mystifying.

Excellence in our institutions must be based on the educational measurement of excellence and that alone. Philosophical posture is incidental to this and the student should be exposed to the full spectrum of chiropractic. Unity can be achieved without jeopardizing excellence under these terms. If we consider unity a matter of degree then the first step should

be unity of political purpose to win equal consideration in the laws of our States; to win the esteem and respect of our peers in parallel professions; and to win the acceptance and patronage of our consumer, the patient.

Working together for the common good of the profession, leaving the emotional involvement of "my way" vs. "your way" to individual practice, in time will bring far greater unity than just the political.

New Academic Dean

Dr. Glenn W. Murphy

Dr. Glenn W. Murphy, recently appointed Academic Dean, came to W.S.C.C. just before the Fall 1975 quarter. He began immediately to establish guidelines for better student-faculty-administration communication. In addition to his duties as instructor in neuroscience and genetics, he has been working closely with President Samuel Warren and a committee of other faculty members in a program of curriculum revision.

Dr. Murphy received his A.B. and M.A. in Education as well as his Ed. D. from the University of Kentucky. His professional experience includes, an Assistant Professorship in Biology and Education at Virginia Commonwealth University and Associate Professorship and Acting Head of the General Science Department at Portland State University. He has had numerous journal publications in the field of Biology and Education.

Dr. Murphy is married to Janice Murphy and has three children, Kim, age 17, Kevin, age 13 and Janiece, age 9. Kim is presently a PSU freshman with a pre-chiropractic major.

X-Ray Technique Non-Energized Laboratory

A laboratory for the practice of x-ray techniques is presently being developed on the WSCC Campus in the east end of the building known as Joseph House. Work on the project began in November and is continuing. Classes began using the facility on January 5, 1976.

Prior to the establishment of the laboratory, x-ray technique labs were taught at the WSCC Clinic. Student participation was limited due to the availability of only a single x-ray unit at the clinic. The presence of classes at the clinic resulted in crowding of that facility. With increased utilization of the clinic it became necessary to provide an alternative method for x-ray students to gain the appropriate experience.

The new laboratory will serve as a practice area for learning x-ray positioning, equipment handling and quality evaluation of radiographs. It is a simulated x-ray facility and will not actually produce x-rays. Non-energized x-ray equipment and accessory items, including lighted collimators for projection of the would-be radiation field, make it possible for students to "mock-up" a complete x-ray procedure. The viewing of selected radiographs in conjunction with the simulated practice will help to integrate the experience in the laboratory.

When completed this facility will include four x-ray tables and tube stands upright cassette holders, x-ray illuminators, radiographic accessories, storage and work surface units and seating space for twelve students. At present there are three x-ray units, one collimator and a growing collection of accessory items.

The college is grateful to Dr. Paul Bray of Medford, Dr. Forrest Goddard and Dr. Fred Warner of Salem and Mr. Charles Wilson of Philips Medical Systems, as well as local x-ray equipment dealers, for their generous contributions of equipment, accessories and ideas for furnishing the laboratory. Preparation of the laboratory room, repair and installation of equipment is being done by WSCC students through the Work Study Program. This has resulted in a tremendous savings to the college and a unique learning opportunity for the students involved.

Although the laboratory will provide much of the learning experience in x-ray techniques, it cannot totally supplant the use of functional equipment and the taking of actual radiographs in the students' course work. It is therefore planned that classes will receive "outside assignments" to take real x-ray examinations after they have demonstrated their expertise in the laboratory. Appointments will be made at the clinic for

student and patient, making it possible to coordinate student activity with the clinic schedule. This student activity will be supervised by the registered x-ray technologist on the clinic staff and will be constantly reviewed and critiqued with the student by the instructor in x-ray technique. Some of these assignments have now been completed by the students enrolled in X-Ray Technique II and the enthusiasm of students, instructor and clinic staff attest to the success of the program. Clinic extern who examine and sometimes treat, the patients "recruited" by the x-ray students are also enjoying benefits from these new teaching methods.

Recent Changes in the Library

Since October, 1975 the Library has gone through several changes. The first being an increase in staff and operating hours. Judy Bar-Tzur was hired as librarian at the end of October. She received her M.A.L.S. from the University of Michigan in Dec. 1975. Two additional work-study students were hired to bring the total of part-time help to 5. The library extended its hours to cover the evenings and is now open from 8:00 A.M. to 9:00 P.M. Monday through Thursday and from 8:00 A.M. to 5:30 P.M. on Fridays.

When W.S.C.C. acquired the campus from Marycrest High School, they also acquired their library collection. The books were checked over by the library committee and those that were appropriate were kept. Those that were not kept were sold at a school book sale. The sale brought in close to \$600. to be used by the library for badly needed bibliographic tools.

The United Medical Laboratories Library Collection purchased a year ago is now being shelved and will soon be ready for use. New shelves have been arranged to form a periodicals room. The journals from the United Medical Laboratories Library are now being shelved and will be in full use very soon. Light reading materials have been set aside for a browsing lounge. Finally, older and more valuable books have been set aside to become part of a historical collection.

The library committee is working with the Librarian to bring the periodicals collection up to date. The number of new subscriptions will be double, or perhaps triple the old number. We now have nearly 6000 catalogued technical reference volumes plus 20-30,000 technical journals and periodicals.

For those items not found in the W.S.C.C. library, students & faculty are urged to take advantage of interlibrary loan. The University of Oregon Health Science Center Library is called upon now for loan requests, but as soon as proper bibliographic tools are obtained, virtually every medical library in the region will be available for requests.

Throughout the year the library receives many donations. Often books are sent from businesses such as Dartel Laboratories who send a new book each month. Other times we receive books from Chiropractors in private practice. Whether the books are new or not they are checked carefully and most are a welcome addition to the library. Any person who might have journals or books they no longer use, but feel might be useful to the library are encouraged to donate them. Their name will be placed in the front of the book indicating they have donated it. Since funds for new acquisitions are so limited, this is a major source of new material.

Student Financial Aid News

Western States Chiropractic is currently participating in four Federal Student Financial Aid programs. These programs are intended to assist students in meeting their college costs. If you are attending school and find it difficult to pay tuition, books and living expenses or know a student in need, you should read these program descriptions:

I. BEOG is a grant-in-aid program. To qualify for grant assistance through this program for the 1975-76 academic year, an applicant

- 1) Must not have attended a post-secondary institution prior to April 1, 1973 (this restriction will not apply to applications for the 1976-77 academic year), and
- 2) Must show financial need.

Basic Grants range from \$200-\$1400 per academic year.

II. CWSP is an employment program. Through Federal College Work Study students are placed in jobs both on and off campus. The Federal College Work Study Grant can be used to pay a portion of the eligible student's earnings when the student is employed by a non-profit agency. All CWSP students must *earn* their award. Monthly payments are made to students for the hours worked.

III. FISL-GSL are student loan programs. Students should obtain the loan applications from the Financial Aid Office at Western States Chiropractic College. The maximum student loan is \$2,500 per year (less in some states or at certain banks). Interest on the loans is 7%. Total debt for all undergraduate and graduate work is \$10,000.

The government will pay the 7% on the student's loan until repayment begins if:

- 1) The student's adjusted family income is *less* than \$15,000 *and* the requested loan is \$2,000 or less.
- 2) The adjusted family income is less than \$15,000, the requested loan is more than \$2,000 and the student

shows financial need according to a *standard need analysis.

- 3) The student applicant's adjusted family income is \$15,000 or more and the applicant shows financial need on the *standard need analysis.

Loans *must be repaid*. Payment begins 9-12 months after the borrower graduates or leaves school. Minimum payments are \$30 per month. Students can defer payments for up to three years while serving in the Armed Forces, Peace Corps, VISTA (university year for ACTION, ACTION Cooperative Volunteer Programs, Volunteers in Justice, and Program for Local Service) and any time the student returns to half-time study at an eligible institution.

IV. SEOG is a grant only for students with extraordinary financial need *and* who have not received a BA/BS degree. The SEOG is only for the first four years of school. SEOG grants may range from \$200 to \$1500 per year depending on the student's financial need as calculated on a standard need analysis.

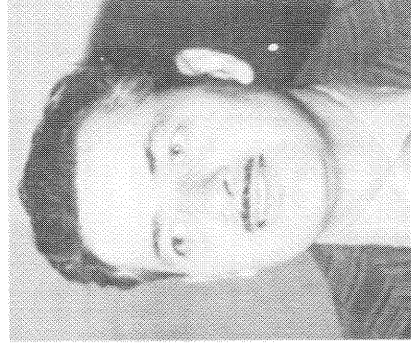

If you have any questions regarding Federal Financial Aid or wish to apply, you should make an appointment to see Mrs. Suzanne Carlson.

Mrs. Carlson's office hours are:

Mondays	9 am — 11 am
Tuesdays	8 am — 4 pm
Thursdays	9 am — 11 am

Please note: Applications for financial aid for the 1976-77 (July 1, 1976 — June 30, 1977) year are available in the Financial Aids Office.

*The College Scholarship Service's SFS is the standard need analysis used at WSCC.

Administration to be Traveling

Dr. J.C. McKee, Vice President for Research and Dean of Graduate School, Mississippi State University.

Admission will be another object of Dr. MacFadden's trip. He will be interviewing prospective students in Denver, St. Louis and New York; Shortly after the first of February, he will be visiting South Oregon College, Lane Community College and Washington State University.

Mr. Warren and Dr. Murphy will be attending the Council on Chiropractic Education meetings in Albuquerque, New Mexico, the second week of February. At that time they will speak to the Commission on Accreditation regarding the College Annual Report and they will be answering any questions the Council might have regarding the operation of the school.

Dr. Murphy will meet with the Deans of the other Colleges in a three day Dean's meeting and Mr. Warren will meet with the Council on Chiropractic Education.

President Warren, Dr. Murphy and Dr. MacFadden will attend the Washington Chiropractic Association meeting in Seattle in early February. Mr. Warren will be speaking to the group about the progress made by Western States Chiropractic College.

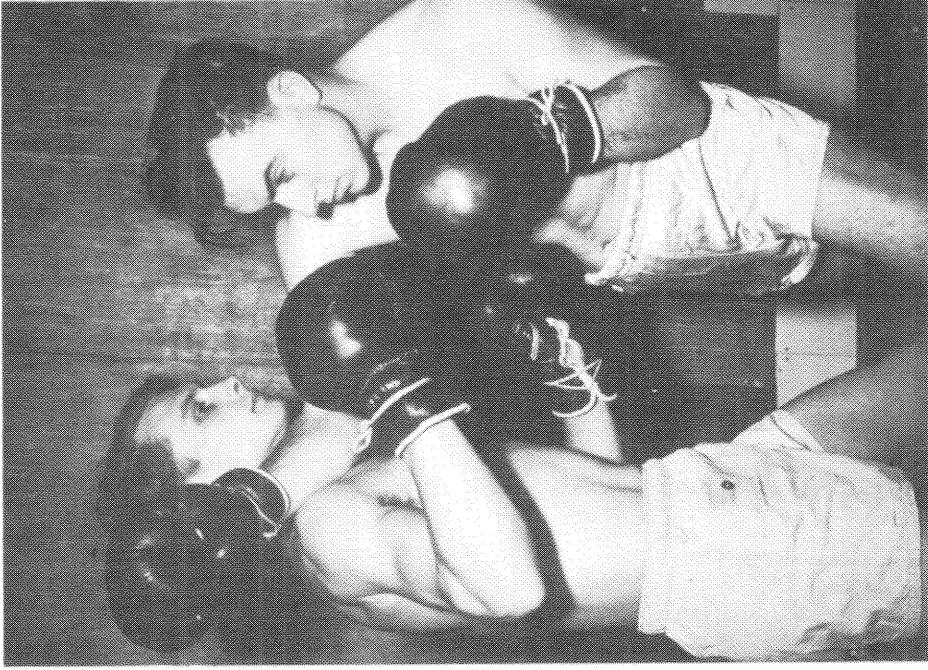

Mr. Warren, Dr. MacFadden and Dr. Murphy will be traveling far and wide in the first two months of the year representing the College in various capacities.

Dr. MacFadden has been named as one of three members of an appeal panel to hear the appeal of Sherman College of Spartanburg, South Carolina. Sherman was denied correspondent status by the Commission on Accreditation of the Council on Chiropractic Education. The other members of the panel are Dr. Randell Thompson, assistant Executive Director of the North Central Association of Colleges and Schools and

Financial Aid Notes

Applications for Supplemental Educational Opportunity Grants & College Work Study 1976-1977 are available now. They must be completed and returned to the Financial Aids Office by June 1976.

WHO'S WHO?

Real Estate Advisor Named

At a recent meeting of the Board of Trustees of the Health Research Foundation, President Dr. George Dunn, directed Dr. MacFadden, Dean of Administration to make a complete study of the several practices involved in the operation of the college and to involve any professional help necessary to bring the property appraisals up to date.

Dr. MacFadden has employed the services of Mr. Robert Newell, M.A.I. Real Estate Appraiser and Counselor, to help prepare reports for the Board of Trustees.

Dr. Forrest Goddard was appointed to supervise the study of the college campus and Dr. Darald Bolin is to investigate the present and future clinics.

Alumni News . . .

Recent Visitors to the Campus

Dr. Neil Trosper — Great Falls, Montana
Dr. Bud Trosper — Missoula, Montana
Dr. Ed Samuels — Coos Bay, Oregon

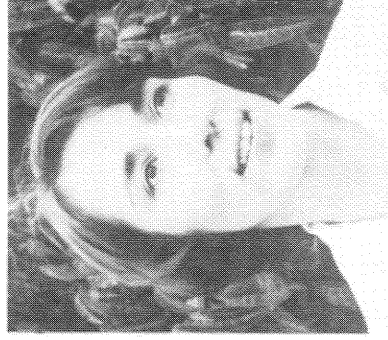

Send any news you might have regarding W.S.C.C. Alumni to "The Reporter" — Editor. Black & White pictures can also be used.

Thanks

New Faculty . . .

Ruth Ann Ehrlich

Mrs. Ruth Ann Ehrlich joined the W.S.C.C. staff at the Fall 1975 quarter. Her experience and training as a radiographic technologist have been invaluable in her X-Ray Technique courses. She conceived of and established the Non-energized Technique Laboratory which now greatly enhances the instruction of position and radiographic procedures.

Mrs. Ehrlich attended the University of Michigan, Yakima Valley College and College of San Mateo. She received her diploma in Radiologic Technology after a 2 year AMA training program at St. Elizabeth School of X-Ray Technology in Yakima, Washington. Her professional experiences include, Chief Technologist and Co-director of Training at St. Elizabeth Hospital, Yakima, Washington; Chief Technologist for 3 years at Forest Grove Community Hospital, Oregon; Inservice

Radiology Instructor at Peninsula Hospital, Burlingame, California; Instructor and Program Director, Radiologic Technology, Yakima Valley College, Washington; Assistant Chief Technologist, Good Samaritan Hospital and Medical Center Hospital, Portland; 3 years as Radiology Instructor at Portland Community College; and for a year before joining WSCC as Chief Technologist, Radiology, Woodland Park Hospital, Portland.

In her "spare time" she has, for the past 5 years, been Past President, member of the Board of Directors and Chairman of the Legislative Committee of the Oregon Society of Radiologic Technologists; two years as member of Legislative Activities Committee of the American Society of Radiologic Technologists; and former Council member, guest lecturer and member of the Education Committee of the Northwest Conference of Radiologic Technologists.

Mrs. Ehrlich is the wife of Eugene W. Ehrlich and has three daughters, aged 17, 10 and 7.

Dr. Ronald C. Menke

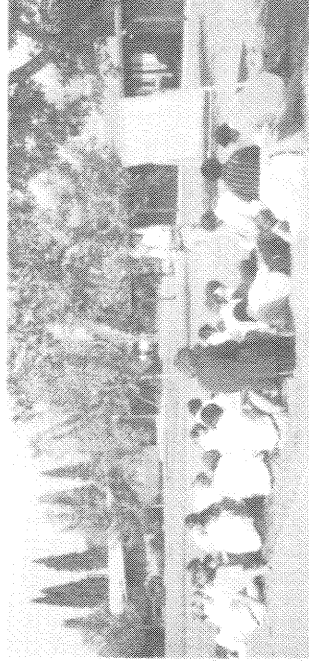

Dr. Ronald C. Menke, who joined the W.S.C.C. staff at the Fall 1975 quarter, was recently appointed Chairman of the Basic Sciences Division. In addition to his teaching of Physical Chemistry and Organic Chemistry, he was instrumental in setting up a chemistry tutorial program. Students agree this is of immense value. In addition, he is establishing a formal Remedial Chemistry Review course for all those who show significant weakness in this area as judged by entrance examination.

Dr. Menke received his B.S. in Chemical Engineering from Oregon State University, Corvallis, and his Ph.D in Chemical Engineering and Physical Chemistry from the University of Cincinnati. He taught courses in Transport Phenomena and Basic Thermodynamics at the University of Cincinnati. As Research Chemist at Formica Corp. for 5 years, he developed mathematical models of warpage and postforming of plastic laminates and carried out significant product development and improvement research studies at the laboratory, pilot and production levels.

Dr. Menke is single.

REMEMBER WHEN?

Chemistry the easy way - a summer class on the lawn.

ACA Policy on Acupuncture

The ACA Journal of Chiropractic announced in their August, 1975 issue that the following policy on acupuncture was adopted on June 30 at the ACA meeting in Honolulu:

Clinical research and practice have shown the modality of acupuncture to be of therapeutic value in the treatment of human ailments and the relief of pain.

There has been substantial development of responsible and structural curriculum among the health sciences.

Many state licensing boards are revising statutes or rules to include acupuncture as an adjunctive procedure within the scope of chiropractic.

Therefore, the American Chiropractic Association encourages the judicious development of curricula, research and clinical procedure of this ancient healing method, and that it be integrated, where appropriate, as an adjunctive and supportive procedure which should be utilized only by the D.C. who is qualified by education and clinical experience, and who has been examined and certified by an appropriately accredited body.

The American Chiropractic Association further suggests a minimal curricula such as the following:

- A. 200 hours of study under institutions having status with CCE or appropriately recognized instructors.
- B. 100 hours of clinical application, including at least 10 case reports, fully documented and researched.
- C. Examination by an institution and/or licensing board in clinical and didactic aspects.
